EDUCATION

Saranathan College of Engineering

B.Tech – Artificial Intelligence and Data Science | CGPA: 8.02 / 10

2024 – 2028

National College Higher Secondary School

Higher Secondary Education | Score: 92%

2024

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C++

Core CS Fundamentals: Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, REST APIs

AI and Machine Learning: Model Training, Model Deployment, AI Agents, Predictive Analytics

Frameworks and Libraries: React Native, Expo, FastAPI, TensorFlow

Cloud and DevOps: CI/CD, Containerization, API Development, System Monitoring

Developer Tools: Git, GitHub, Docker, Linux, Postman, n8n

EXPERIENCE

DevOps Intern | Springer Capital

Feb 2026 – Present

- Automated operational workflows using scripting, reducing manual intervention in deployment and monitoring processes.
- Researched and proposed open-sourced alternatives to paid tools, evaluating feasibility and documenting implementation plans to reduce infrastructure costs.
- Assisted in maintaining CI/CD pipelines and infrastructure reliability, collaborating with engineering teams to improve software delivery.

PROJECTS

AI-Powered Eye and Tongue Disease Detection App

- Trained and deployed custom deep learning models for multi-class disease classification.
- Built a FastAPI backend with a unified inference API supporting multiple prediction models simultaneously.
- Developed a React Native mobile app featuring scan history, structured prediction reports, and an AI-powered medical assistant.

AI-Powered Security Investigation and Auto-Remediation Platform

- Designed an AI-driven SecOps workflow to automate vulnerability investigation and incident analysis at enterprise scale.
- Integrated intelligent agents for vulnerability discovery, alert validation, and continuous learning from historical security incidents.
- Automated remediation recommendation generation, significantly reducing manual security triage effort.

AI-Powered ITOps Assistant | Beak AI Studio

- Built an intelligent operations assistant for real-time log analysis, anomaly detection, and infrastructure forecasting.
- Implemented predictive analytics to anticipate infrastructure failures before they occur, generating proactive remediation alerts.

ACHIEVEMENTS AND COMPETITIVE PROGRAMMING

- Winner – JET Hackathon (Coding and Debugging Track).
- Solved 100+ Data Structures and Algorithms problems on LeetCode.
- Presented MediScan, an AI-powered healthcare assistant, as part of a 3-member team at a college-level showcase.
- Active participant in competitive programming contests; targeting Codeforces problem sets.
